DESIGNED ON MAUI BY

# ROBERT STROJ

Sail Development  
MY26

Apex, our new 4- to 5-batten wave sail, was designed to complement the Combat – especially focusing on jumping performance, wide wind range, and control even in extremely overpowered conditions. It was a really nice development process, working with Robby, Marino, and Morgan. We tested larger sizes in Maui and Tenerife, in both onshore and side shore conditions, while smaller sizes were developed in the extreme conditions of Pozo and Chile.

The new Speedster EVO is rooted directly in the development of our Racing and Speed sails. It carries over key elements like the main construction and design philosophy from the RS:Racing EVO, and was tested by both professional riders and dedicated freeriders – to ensure not only top performance, but also a light feel in the hands and easy handling in maneuvers.

Alongside these two completely new sail lines, we continued the development of our Speed, Slalom, and Foil Racing sails – delivering the most refined, race-winning EVO designs to date.

[BACK TO THE OVERVIEW »](#)

„This season, the focus went into the development of a **completely new wave sail, a high-performance no-cam freeride sail**, and updates to our Slalom, Speed, and Foil racing sails.“

# COMBAT

REGULAR  
HD &  
PRO FUSE

„Lighter, more  
controllable - and  
now with extra  
power for light  
winds and onshore  
conditions.“  
- ROBBY SWIFT

The Combat remains the go-to sail for our World Cup Team Riders, refined for 2026 with subtle yet powerful batten enhancements that boost low-end power – while keeping the legendary upper-end control that has made this sail so popular.

**Combat Pro Fuse construction** features Q-Bond welded tack and clew, Ultra Scrim custom-laminated panels in the head and body, plus a clear window for optimum visibility and feather-light handling.

**Combat HD** now features Radial Ultra Technology in the foot and clew, with Ultra PE yarns aligned precisely along load paths – delivering crisp response, maximum durability, and razor-sharp control. The HD version features an X-Ply window for extra strength and even lighter weight.

**Combat Regular** now features Radial Ultra Technology in the foot and clew, with Ultra PE yarns aligned precisely along load paths – delivering crisp response, maximum durability, and razor-sharp control. The regular Combat features a clear window for those who prioritize visibility.

- 6,3

## NEXT-LEVEL JUMP & WAVE CONTROL

Meet the brand-new Apex – designed for riders who demand explosive jump performance and unwavering stability in super-high winds. Inspired by the Combat’s legendary control, the Apex elevates the game with more back-hand power and enhanced stability and handling that never loses composure.

The Apex sports a 4-batten layout up to 5.1 m<sup>2</sup>, and 5 battens from 5.5 m<sup>2</sup> upward, providing a broad wind range that reduces the number of sizes needed.

Apex HD features Radial Ultra Technology in the foot and clew, with Ultra PE yarns aligned precisely along load paths – delivering crisp response, maximum durability, and razor-sharp control. The HD version features an X-Ply window for extra strength and even lighter weight.

Available in HD & Pro Fuse constructions, the Apex is Marino’s sail of choice for pushing jump boundaries with confidence.

POWERFUSE TECHNOLOGY:  
ULTRALIGHT AND EXTREMELY  
MANEUVERABLE

HD TECHNOLOGY STILL ULTRALIGHT  
AND EXTREMELY MANEUVERABLE

TEAMRIDERS’ CHOICE IN  
HIGH WIND JUMPING CONDITIONS

EXTRA POWER BUT  
STILL EXTREMELY AGILE

4 BATTENS 3.9 - 5.1  
5 BATTENS 5.5 AND UP

### DID YOU KNOW?

Compared to the Atlas, the Apex is far more agile and user friendly. With the new outline and 4 batten configuration from 5.1 and down, it feels like a Combat on steroids. Instant power to get you going and allow you to jump as high as possible but still extremely maneuverable on the wave.

PRO FUSE

HD

THE NEW

# SPEEDSTER EVO

„Developing the Speedster EVO, our high-performance no-cam freeride sail, was both challenging and rewarding. Drawing from years of RS:Racing EVO development, we **focused on combining top speed, control and handling with easy maneuverability.** Key features like a high aspect ratio, multiple taffeta luff panels and a seamless leading-edge sleeve deliver early planing, smooth jibes and tacks, and excellent top-end control. I'm very happy with the result.“

ROBERT STROJ - SAIL DESIGNER

## ULTIMATE FREERACE REDEFINED

**Introducing the Speedster EVO – a totally re-imagined sail that brings full race DNA into a cam-free design.** Blending the triple-panel luff sleeve, airflow-optimized design, and window layout inspired by the record-setting RS:Racing EVO, this sail achieves unmatched acceleration, lightness, and stability – while enhancing maneuverability for jibes and waterstarts.

Compared to the original Speedster, Speedster EVO achieves a new level of lightweight handling thanks to a shorter boom and our dynamic batten concept: 6 battens in 5.0-7.0, 7 battens in 7.5 & 8.0. It also utilizes exactly the same material spec of our pure racing sails.

For freerace speed fans, this is the most advanced cam-less sail we've ever built.
